ABOUT THIS REPORT

This report aims to provide a quarterly analysis of the utilization and financial data submitted by Oregon's hospitals to the DATABANK program.

DATABANK is a state-mandated monthly hospital data program administered by Apprise Health Insights in collaboration with the Office for Oregon Health Policy and Research (OHPR). Please note that all DATABANK data are self-reported by the hospital and represent a twelve-month calendar year. Accuracy is the responsibility of the reporting hospitals.

Because this report's objective is to provide a complex dive into the data, the graphs and methods may change between reports. This forces only the most compelling stories to be exhibited. The determination of which graphs and stories to focus on is evaluated by hospital finance and data experts at Apprise.

Note: Kaiser Sunnyside and Kaiser Westside hospitals are excluded from this analysis due to the lack of financial data available in DATABANK.

LAYOUT INFORMATION

Aggregate vs Median
This report uses two statistics to report statewide hospital data: median and aggregate. Aggregate numbers sum up the entire amount for all hospitals into one number, where median only takes the number from the middle of the pack. Aggregate is useful when looking at the industry as a whole, such as the percent of Medicaid charges or the total number of patients visiting Emergency Departments in the state. Median is useful when outliers can be highly-influential on a statistic, such as a large hospital having a significant negative margin dragging down the statistic for the whole state. Apprise tries to conform to the Oregon Health Authority’s Office of Health Analytics on the subject as much as possible: https://www.oregon.gov/oha/analytics/Pages/Hospital-Reporting.aspx

Trend vs Seasonal-Adjusted
Each metric in this report contains two graphs: a trend analysis and a seasonal-adjusted graph. The trend analysis is a simple line graph that shows how the metric has changed over time linearly. However, because many of these metrics tend to be affected largely by seasonal influences, the seasonal-adjusted graph shows a comparison of each quarter to the same quarter in the previous two years.
Notes for the Q2 2018 Report
-The numbers and figures in this report are based on a DATABANK download from August 23, 2018.
-Harney District Hospital has been excluded from this report due to unavailable data.
-Kaiser Sunnyside and Westside Medical Centers have been excluded from this report due to only having two quarters of financial data available. They will be added to the Q4 2018 report.

QUICK STATS

1. Operating Margins are stabilizing after large decreases in 2017

2. Medicaid Payer Mix continues to decrease

3. Medicare Payer Mix continues to increase

4. Charity Care continues to increase

OPERATING MARGIN

*Measure of profitability from the reporting entity's operations*

Median Operating Margin increased this quarter, both in overall trend and seasonally-adjusted (Figures 1 & 2). Operating Margins may be stabilizing after the significant decreases in 2017.

![Operating Margin Percent](image1)

**Figure 1**

NET PATIENT REVENUE

*The revenue the reporting entity generates from patient care*

Aggregate Net Patient Revenue (NPR) increased this quarter, both in overall trend and seasonally-adjusted (Figures 3 & 4). The increase from Q1 2018 (1.3%) was smaller than previous Q2’s (2016 = 3.8%, 2017 = 1.5%).

MEDICAID PAYER MIX

*The amount of total charges that were attributable to Medicaid*

Aggregate Medicaid Payer Mix continues to decrease (Figures 5 & 6). The past eight quarters have all seen decreases in seasonally-adjusted Medicaid payments.

MEDICARE PAYER MIX

*The amount of total charges that were attributable to Medicare*

Aggregate Medicare Payer Mix continues to increase (Figures 7 & 8). The past eight quarters have seen increases in seasonally-adjusted Medicare payments.
COMMERCIAL & OTHER PAYER MIX
*The amount of total charges that were attributable to a commercial insurer or other payer*

Aggregate Commercial & Other Payer Mix remains fairly stable at approximately 31-32% (Figures 9 & 10).

![Diagram of Commercial & Other Payer Mix](image)

SELF PAY PAYER MIX
*The amount of total charges that were attributable to patients paying primarily out-of-pocket*

Aggregate Self Pay Payer Mix remains fairly stable at approximately 1-2% (Figures 11 & 12).

![Diagram of Self Pay Payer Mix](image)
CHARITY CARE PERCENTAGE

The amount of free care provided to patients who are determined by the hospital to be unable to pay their bill.

Median Charity Care as a percentage of Total Charges has been steadily increasing (Figures 13 & 14). Seven of the last eight quarters have seen increases in seasonally-adjusted Charity Care.

BAD DEBT PERCENTAGE

Unpaid obligation for care from patients who have not requested or do not qualify for financial assistance and have been unwilling to pay their bill.

Median Bad Debt remains fairly stable at approximately 1% (Figures 15 & 16).
Q2 2018 HOSPITAL UTILIZATION AND FINANCIAL ANALYSIS

TOTAL DISCHARGES
*The total number of inpatient discharges during the reporting period*

Aggregate Inpatient Discharges remain fairly stable at approximately 80K (Figures 17 & 18).

TOTAL OUTPATIENT VISITS
*The total number of outpatient visits during the reporting period*

Aggregate Total Outpatient Visits decreased this quarter in overall trend but increased seasonally-adjusted (Figures 19 & 20). The decrease from Q1 2018 was unexpected as most Q2’s have shown increases from Q1.
**AMBULATORY SURGERY VISITS**
*The total number of ambulatory surgery visits during the reporting period*

Aggregate Ambulatory Surgery Visits are highly seasonal, with counts typically much higher in Q2 and Q4 (Figures 21 & 22). The overall trend seems to be stable at 45-50K.

**EMERGENCY DEPARTMENT VISITS**
*The total number of patients seen in the emergency department who are not later admitted as inpatients*

Aggregate Emergency Department Visits decreased this quarter, both in overall trend and seasonally-adjusted (Figures 23 & 24). The overall trend seems to be stable at 320-345K.
APPENDIX A: REGIONS

Central Oregon: Mid-Columbia Medical Center, Providence Hood River Memorial Hospital, St. Charles Bend, St. Charles Madras, St. Charles Prineville, St. Charles Redmond

Eastern Oregon: Blue Mountain Hospital, CHI St. Anthony Hospital, Good Shepherd Health Care System, Grande Ronde Hospital, Harney District Hospital, Lake District Hospital, Pioneer Memorial Hospital-Heppner, St. Alphonsus Medical Center-Baker City, St. Alphonsus Medical Center-Ontario, Wallowa Memorial Hospital

Northwest Oregon: Columbia Memorial Hospital, Providence Newberg Medical Center, Providence Seaside Hospital, Samaritan North Lincoln Hospital, Samaritan Pacific Communities Hospital, Tillamook Regional Medical Center, Willamette Valley Medical Center

Portland Metro Area: Adventist Health Portland, Legacy Emanuel Medical Center, Legacy Good Samaritan Medical Center, Legacy Meridian Park Medical Center, Legacy Mount Hood Medical Center, Kaiser Sunnyside Medical Center, Kaiser Westside Medical Center, OHSU, Providence Milwaukie Medical Center, Providence Portland Medical Center, Providence St. Vincent Medical Center, Providence Willamette Falls Medical Center, Shriners Hospital-Portland, Tuality Healthcare

Southern Coast: Bay Area Hospital, Coquille Valley Hospital, Curry General Hospital, Lower Umpqua Hospital, Southern Coos Hospital & Health Center

Southern Oregon: Asante Ashland Community Hospital, Asante Rogue Regional Medical Center, Asante Three Rivers Medical Center, Mercy Medical Center, Providence Medford Medical Center, Sky Lakes Medical Center

Valley: Good Samaritan Regional Medical Center, Legacy Silverton Medical Center, McKenzie-Willamette Medical Center, PeaceHealth Cottage Grove Community Hospital, PeaceHealth Peace Harbor Hospital, PeaceHealth Sacred Heart Medical Center at RiverBend, PeaceHealth Sacred Heart Medical Center University District, Salem Health West Valley, Salem Hospital, Samaritan Albany General Hospital, Samaritan Lebanon Community Hospital, Santiam Memorial Hospital

</tbody>
</table>

**Type A Hospitals** are small and remote and have 50 or fewer beds. Type A hospitals are located more than 30 miles from another acute care, inpatient facility.

**Type B Hospitals** are small and rural and have 50 or fewer beds. Type B Hospitals are located 30 miles or less from another acute care facility.

*Designates a CAH facility (more information in Appendix C: Definitions)
APPENDIX C: DEFINITIONS

Bad Debt: Bad debt is the unpaid obligation for care, based on a hospital's full established rates, for patients who are unwilling to pay their bill. Unlike charity care, bad debt arises in situations where the patient has either not requested financial assistance or does not qualify for financial assistance. In these cases the hospital will generate a bill for services provided. For uninsured patients, the amount of bad debt can pertain to all or any portion of the bill that is not paid. For patients with insurance, certain amounts that are the patient's responsibility—such as deductibles and coinsurance—are expensed as bad debt if not paid.

Charity Care: The dollar amount of free care, based on a hospital's full established rates, provided to patients who are determined by the hospital to be unable to pay their bill. The determination of a patient's ability to pay is based on the hospital's charity care policy. Hospitals will typically determine a patient's inability to pay by examining a variety of factors such as individual and family income, assets, employment status, or availability of alternative sources of funds. Determination of charity care status is made prior to admission if the patient has requested and applied for financial assistance. Charity care status may be granted at a later date depending on the circumstances of the admission, such as an emergency admission, no request for financial assistance prior to admission, or lack of information about the patient's financial status at the time of admission. Financial assistance provided by the hospital may pertain to all or a portion of the patient's bill.

Critical Access Hospitals (CAHs): A designation given to certain rural hospitals by the Centers for Medicare and Medicaid Services. Created by Congress in the 1997 Balanced Budget Act, the CAH designation is designed to reduce the financial vulnerability of rural hospitals and improve access to healthcare in those areas. A CAH must have no more than 25 inpatient beds, maintain an annual average length of stay of less than 96 hours, offer 24/7 emergency care, and be located at least 35 miles away from another hospital.

Emergency Department Visits: The total number of patients seen in the emergency department who are not later admitted as inpatients.

Net Nonoperating Gains: Amount of income or loss after expenses which result from the hospital's peripheral or incidental transactions and from other events stemming from the environment that may be largely beyond the control of the reporting entity and its management. An example would be sale of investments in marketable securities.

Net Patient Revenue: The revenue the reporting entity generates from patient care.

Operating Margin Percent: Measure of profitability from the reporting entity's operations.

Other Operating Revenue: Revenue derived from the reporting entity's operations other than direct patient care. Examples are revenue generated from operation of the cafeteria and gift shop.

Outpatient Surgeries: A planned operation for which the patient is not expected to be admitted to the hospital.

Outpatient Visits: Total number of outpatient visits reported during the reporting period. This includes emergency room visits, ambulatory surgery visits, observation visits, home health visits, and all other visits.

Payer Mix: The amount of total charges that were attributable to one of four payer categories: Medicaid, Medicare, commercial, and self pay.

Reporting Entity: A hospital and any additional consolidated entities that are included in the Income Statement at the front of the audited financial statement. The only exceptions are foundations that the hospital does not want included in its financial reporting.
APPENDIX C: DEFINITIONS (CONT.)

**Tax Subsidies:** Tax revenues from cities, counties or special hospital districts, which assess levies to subsidize the reporting entity.

**Total Charges:** Amount billed for services at full established rates.

**Total Contractuals:** The amount of total charges that have been negotiated away by payers. This is the difference between what the hospital bills for and what it expects to receive as revenue.

**Total Discharges:** The termination of the granting of lodging in the hospital and the formal release of the patient (includes patients admitted and discharged the same day). When a mother and her newborn are discharged at the same time, they count as one discharge. When the baby stays beyond the mother’s discharge (boarder baby), it counts as one discharge for the mother and one discharge for the boarder baby.

**Total Margin Percent:** Measure of profitability from all sources of the reporting entity’s income.

**Total Operating Expenses:** All expenses incurred from the reporting entity. Examples are salaries and benefits, purchased services, professional fees, supplies, interest expense, depreciation, and amortization and rent and utilities.

**Total Operating Revenue:** All revenue derived from the reporting entity’s operations directly related to patient care. Includes net patient revenue and other operating revenue.

**Uncompensated Care:** The total amount of health care services, based on full established rates, provided to patients who are either unable or unwilling to pay. Uncompensated care includes both charity care and bad debt.
